

ENERGYwise

FOR YOUR HOME

Think Energy Efficiency

When you think about saving money, think energy efficiency. By making easy, smart choices in your home, you can contribute to lower energy bills and help the environment. Helping you become more energy efficient is one of our goals as your electric provider and you are invited to take advantage of any or all of these Energy Efficiency Rebates for your home!

ENERGY STAR Home Lighting: The home lighting programs are designed to help residential customers replace standard household lighting with high efficient lighting technology such as compact fluorescent lamps (CFLs), CFL fixtures and light emitting diodes (LEDs). *NOTE: Because of the presence of mercury, CFLs must be recycled. In Minnesota, it is illegal to place them directly in the garbage.* FREE and CONVENIENT CFL recycling is available at all Minnesota Menards and Home Depot locations. For additional options, visit www.earth911.com.

ENERGY STAR Appliances: When you are considering your next appliance purchase, you are encouraged to purchase ENERGY STAR qualified appliances. They will save you energy every day that are used. Agralite Electric Cooperative has rebates refrigerators and freezers in new construction and when the appliance being replaced is properly recycled.

Home Heating and Cooling: During the hot days of summer, you want to ensure you have a high efficient cooling system and that doesn't always "just happen." Agralite Electric Cooperative can help you with an AC Tune Up to ensure maximum

electric energy savings. In addition, when you need to purchase a new air conditioning system, there are rebates available to you for choosing a highly efficient air source heat pump or if you use a registered HVAC contractor for installation.

Ground Source Heat Pumps: While in the mid-west, we can experience seasonal temperature extremes—from scorching heat in the summer to sub-zero cold in the winter—a few feet below the earth's surface the ground remains at a relatively constant temperature. Ground temperatures can hover around 45°F to 55°F. That's when Ground Source Heat Pumps can really make a difference. Your electric cooperative provides substantive rebates for Ground Source Heat Pumps installed in new construction or retrofit applications.

New Home Construction: The New Home Construction program focuses on energy efficient home design and construction. Your electric cooperative will work with you and your home builder to not only provide the latest information and products on energy efficient technologies, but also outline best practices in energy efficient construction standards.
